The "Chedi App" is a cutting-edge mobile application designed to revolutionize plant care and indoor gardening. This innovative app leverages smart technologies, including sensor systems and artificial intelligence, to provide users with real-time guidance on nurturing their indoor plants. With features such as automated watering schedules, sunlight optimization, and pest detection, the Chedi App empowers individuals to effortlessly care for their plants, regardless of their level of gardening expertise or busy lifestyles. Moreover, the app fosters a sense of environmental awareness by highlighting the air-purifying benefits of indoor plants and promoting sustainable living practices. With the Chedi App, users can create thriving indoor gardens, improve air quality, and cultivate a deeper connection to nature, all from the palm of their hand. The "Chedi App" is not just another mobile application, it is a transformative force in the realm of plant care and indoor gardening. Unlike existing systems, the proposed mobile application is designed for real-time crop health monitoring and decision-making. This feature allows farmers to respond promptly to changing agricultural conditions, optimizing their farming practices. The Chedi App seeks to improve the overall user experience in plant care and agriculture. By offering personalized insights and real-time guidance, the app enhances user trust, interaction, and engagement, creating a more fulfilling gardening experience. The Findings from the Chedi App's data-driven insights can inform and shape sustainable farming practices. This objective is focused on influencing agricultural approaches that are environmentally conscious and resource-efficient, contributing to a more sustainable future.
